

Front End Failure Log

Team: Michael Liedeman, Caelen Sharma, Ferdous Azizi, Jiabernadette Dsouza

Test Name	Test Purpose	Failure Nature	Error in Code	Actions to Fix
All tests	Automation Script Execution	NoClassDefFou ndError	Java package mismatch in the execution command	Updated <code>run_tests.sh</code> to use the correct class path
All tests categories	Automation Script Execution	Script failed to find inputs	Loop looked for <code>_in.txt</code> while some files were named <code>.txt</code>	Updated shell glob in <code>run_tests.sh</code> to match existing Phase 1 naming
Change plan tests	Environment/Scripting	Files listed as MISSING	Naming mismatch between input and expected files	Renamed files in <code>tests/change_plan</code> to ensure consistent prefixes
All tests	Matching expected and actual test results	Given input does not result in expected output	Front end and expected output use differing language	Updated expected output language to match Front end implementation
Compilation	Build Java program	<code>removeLast()</code> method not found on <code>List<String></code>	Code uses Java 21+ <code>List.removeLast()</code> method but compiling with older Java version	Replace <code>removeLast()</code> with <code>list.remove(list.size() - 1)</code> for compatibility, or update project to use Java 21 consistently
Test Execution	Run all tests	Script runs but no tests are processed	Incorrect file path pattern in script loop <code>(\${dir}*. *.txt)</code> and possible missing test files	Fixed file glob pattern in <code>run_tests.sh</code> to <code>"\$dir"/*.txt</code> and verified test directory structure
